

UNIVERSITY OF WOLLONGONG STUDENT ACCOMMODATION, KEIRAVILLE, NSW

The construction of this large student accommodation complex required a wall system that would deliver results...

Consider the scope of the project:

- Total of 4 buildings up to 7 levels each
- Total quantity of 13,420 m² of AFS LOGICWALL supplied
- AFS LOGICWALL utilised as the structural wall system for party walls, external facades, lift & stair cores, blade columns and sheer walls.

Consider the consistency of service:

- AFS supplied 5,200m² of wall in September 2012 to this project alone, which equates to 1 semi-trailer load of walls per day
- HD Projects (Installation Company) had a crew of up to 20 men installing and core filling walls continuously

...and realise the speed of construction:

- Commenced supply June 2012 & the structure was finished in January 2013!

Make the benefits of building with AFS LOGICWALL your own – contact us to see how we can put your project in front!

FACTS & FIGURES

Units

184 x Studio units
44 x 4 bedroom units

7 levels

Quantity of AFS LOGICWALL®

13,420m²

Applications

AFS 162mm Inter-tenancy walls
AFS 162mm External façade walls
AFS 200mm Lift & stair core
AFS 262mm Blade columns & sheer walls

WHAT OUR CLIENT SAYS...

I have worked with the company AFS Walling Solutions on a \$40M Student Accommodation Project at Wollongong University that extensively used their AFS LOGICWALL System.

This product is a permanent formwork wall system & was used for both internal & external walls on the Project. For some internal walls the fibre cement panel joints were set & then the wall simply painted for a quick durable finish. The external walls in this Project were clad with various metal cladding products however you

could just use an acrylic texture system to finish it if desired.

Through-out the Project the AFS LOGICWALL supply & procurement went smoothly & they provided any technical support as needed during installation. The main advantages of this product was the **speed of structure construction**, the **safer handling & installation** when compared to products like precast walls, & its performance compliances for environmental acoustic & fire measures.

The quality and type of finishes can be altered to suit the requirements of your project which are set out in the supplied product brochures. This information should be discussed with the client parties to ensure their full understanding.

I can confidently recommend AFS Walling Solutions as a solid and reliable supplier & their Logicwall system as a very good solution for future commercial construction projects. - **Builder**
