

“2620 APARTMENTS” ANTILL STREET, QUEANBEYAN NSW

These apartments were designed in both AFS LOGICWALL® and AFS REDIWALL® which provided a fast, efficient and clean walling solution for the project.

The project, which was located on a corner where access could be challenging, didn't pose a problem as AFS product isn't crane dependent.

What's more the overall material handling efficiencies of the products made a significant contribution to the speed of construction of the project.

WHAT OUR CLIENTS SAY...

“Having worked with AFS Walling Solutions' REDIWALL® and LOGICWALL® products across a couple of projects my experience has been very positive.

I found AFS REDIWALL® to be lightweight, offering easy installation whilst the AFS LOGICWALL® system was particularly impressive providing a clean, lightweight walling system that was quite adaptable as well as being quick and easy to install - these products saved me valuable time and hassle.”
