walling built better

## Grey structure up 6 weeks early

24–28 Wolsley Street, Woolloongabba, Queensland

Being even slightly ahead of schedule on a ‘multi-res’ is invaluable so imagine what it was worth to be nine weeks early. Having chosen afs logicwall®, the builder was delighted to see their grey structure go up six weeks quicker than anticipated. And this *structural efficiency* allowed them to save a further three. Little wonder they have become AFS-converts.

### Our customer says...

**AFS Logicwall®** was chosen over the original column frame design

due to its speed of construction and not being crane dependant. In replacing the conventional columns with logicwall® blade walls we reduced the column thickness and, in turn, the lightweight party wall system between. This was key to the build and meant we had the grey structure up six weeks ahead of target. The AFS team provided valuable engineering-insight and their superior service enabled us to hand over the project nine weeks ahead of our contracted completion date. **andrew herbert, project manager**
