

Ideal for basements, columns, blade & party walls, lift & stair cores, retaining walls and retention tanks

**afs rediwall**® Permanent formwork walling system for above and below-ground application

**10x** better than blockwork | more than **2x** faster than blockwork

Here's why...

|                                                                                                                                                                          | Blockwork |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Load bearing</b><br>Has greater load bearing capacity than standard or high strength blockwork                                                                        | X         |
| <b>Versatile</b><br>Comprehensive range of profile widths: 110mm, 156mm, 200mm, 256mm                                                                                    | X         |
| <b>Monolithic</b><br>Core-filled with concrete, clean and even finish                                                                                                    | X         |
| <b>Time saving</b><br>Blockwork is over 2x slower than afs rediwall®, see why at <a href="https://afsformwork.com.au/video-gallery">afsformwork.com.au/video-gallery</a> | X         |
| <b>Easier materials handling</b><br>Lightweight PVC panels are easily positioned by hand                                                                                 | X         |
| <b>More and less</b><br>Range of profiles to maximise floor space, minimise concrete                                                                                     | X         |
| <b>Easy to use</b><br>Components simply snap* or slide together for hassle-free installation                                                                             | X         |
| <b>Quality finish</b><br>High quality, low finish maintenance                                                                                                            | X         |
| <b>AS3600 compliant</b><br>Certified for resistance to fire and water penetration                                                                                        | ✓         |
| <b>Cut-to-size</b><br>Supplied as you need them to avoid wastage—keeping sites clean                                                                                     | X         |
| <b>Fewer trades needed</b><br>Formworkers can build decks/walls & smaller workforce helps reduce WHS issues                                                              | X         |

rediwall® advantages

-  Above and below ground versatility
-  Ease of materials handling
-  Speed of construction and earlier handovers
-  Lightweight, durable system
-  Load bearing structure
-  AS3600 compliant
-  High quality, low maintenance, gloss finish
-  Water resistant
-  Innovative Snap-In™ or slide-in for rapid installation
-  Patented Ezy-Fit™ corner cover for easy placement & inspection of reinforcement
-  Fire performance
-  Significant waste reduction
